

We are constantly striving with all our energy to plan, design, test and manufacture products only for the Stand Up Paddle.

Our R&D never stops working and turns ideas into exclusive Moki objects.

Boards, paddles and accessories are tested continuously and only when we are all absolutely satisfied of results, we then initiate the production.

We know what we create... and each board has its own name.

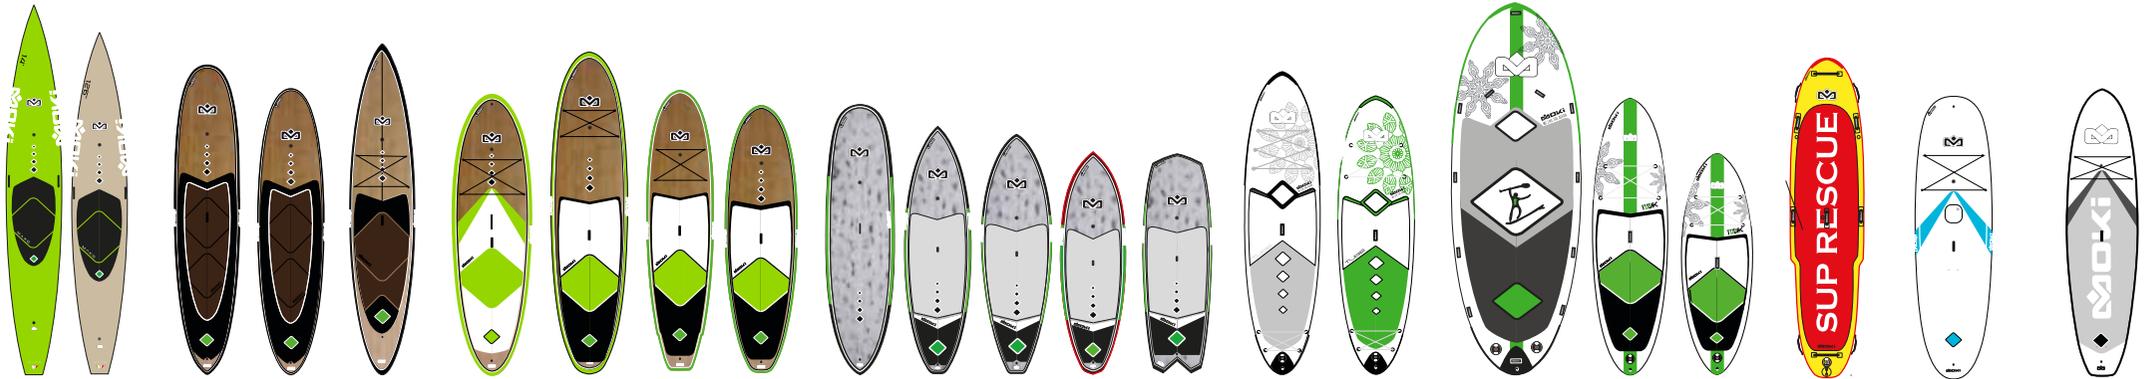

Moki boards arise from our riders' ideas, are computer designed and shaped by CNC machine to ensure the perfect shape.

All boards are laminated with an innovative technology (bamboo sandwich double-UVproof © Moki), using the best epoxy resins.

The extreme attention to details, the extreme care of the finish and the extreme focus on quality are what characterize the Moki Design.

“We spend most of our time in the water and we love what we do”

CARLO ROTELLI  
MOKI FOUNDER \ PRODUCT DESIGNER MANAGER

A person is standing on a bright green kayak in the middle of the ocean. The person is wearing light-colored shorts and is holding a black paddle. The kayak is splashing through the water, creating a large spray of water droplets and bubbles that are frozen in time. In the background, there is a sandy beach with some greenery and a building. The sky is clear and blue.
